

Build guide for

SEQUENCE SELECTOR TRIGGER & MANUAL GATES MOD

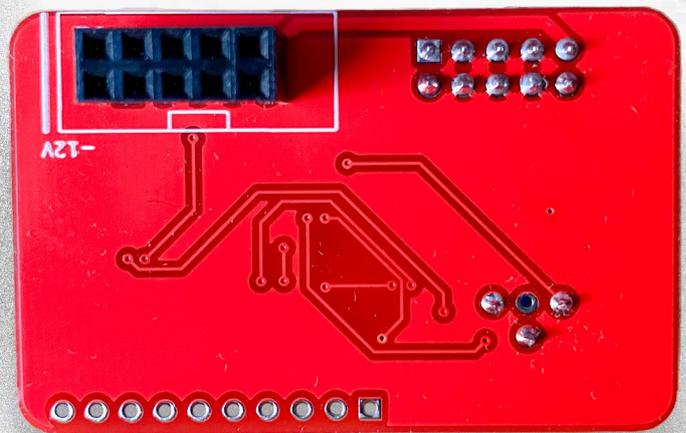

Step 1:

Get the add-on PCB.

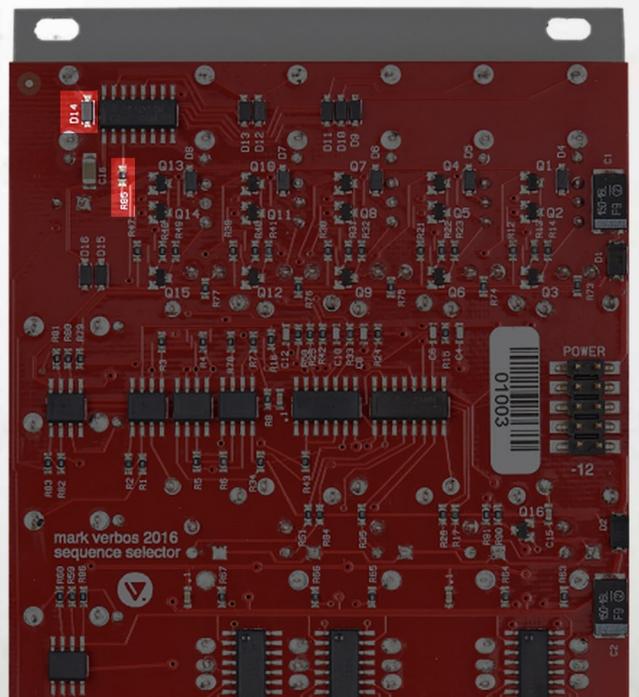

Front

Back

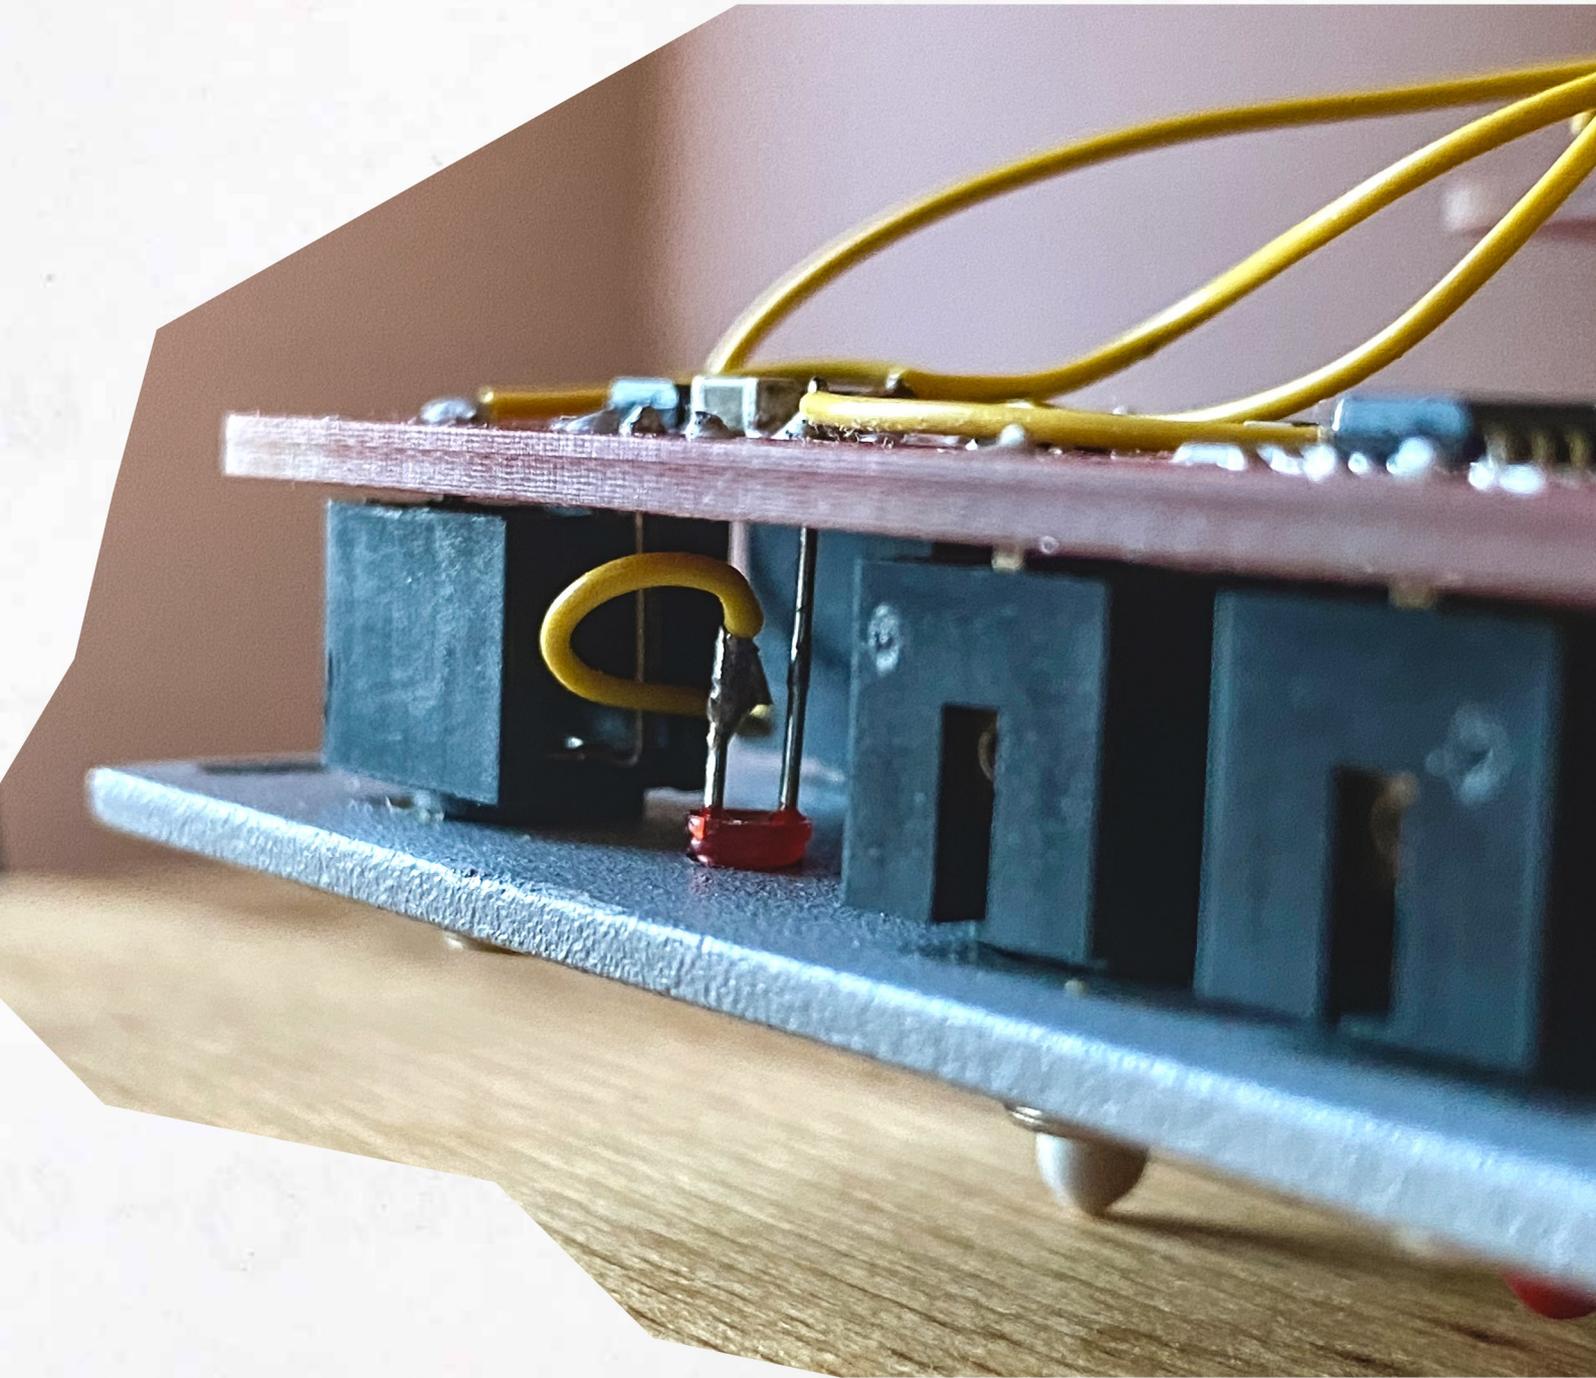

Step 2:

Find R35 and D2 on the main board and desolder them. Put them in a safe place just in case you want to reverse the mod later.

Step 3:

Clip the leg of the gate out LED which is closer to the edge.
This clipped leg will connect to the add-on PCB.

Step 5:

Turn the trimmer fully clockwise.

You may notice that certain modules get triggered an additional time (on the first rest after a trigger.)

Slowly turn the trimmer counter-clockwise until there are no unnecessary triggers.

Step 6:

You're done, happy wiggling!
